

Technical Data Sheet

Indu-Tek Pin and Bush Grease 2

An adhesive, water resistant, high load grease for mining and industrial applications

Pin and Bush Grease 2 is a tenacious grease designed for heavy duty applications where adhesion, shock loading and good corrosion protection is needed. It has been proven ideal for use on bucket pins and bushes on heavy earth moving equipment, crane slews, and also as an assembly and running in compound. The presence of graphite will fill surfaces and distribute load evenly preventing further wear and is therefore particularly suitable to extend the life worn components.

Applications: -

Mining: Bucket Pins, high load applications on drag lines, shovels and dozers, mobile and static cranes

Industrial: Use as an assembly or running in compound. Low speed, high load plain bearings

Features and Benefits: -

- High level of lubricating solids Protects surfaces from wear especially in high load applications, whilst extending lubrication intervals and component life
- Water resistant Fully resistant to water, extending the life of the lubricant and protects against corrosion
- High component adhesion Adhesion improves increase life of lubricant, extending lubricant life and lubrication intervals

Method of Application: -

Pin and Bush Grease 2 can be applied by hand, or by using a standard grease gun (400gm cartridges available). (Due to the high lubricating solids content, **Pin and Bush Grease 2** is not recommended for use on anti-friction bearings).

Part Number: 11015
